One of the most useful advantages of using Photoshop for iPad is the ability to download PSD and PSB files. You can edit these with your favorite design tool, like Photoshop's sister app Affinity Photo, and then save the adjusted PSB file back to Photoshop. As with any other edition of Photoshop, you can link your Dropbox account and use it to collaborate while you're working on the same file. And as with any edition, you can also use Sketch Wi-Fi for Photoshop CC to work offline. Can it even be done justice by only talking about it? You'll need to experience the experience yourself. The variety of tools, the speed, even the design page, is totally amazing. And the fact that this team is so committed to the user experience and making a device that can augment it is really impressive. If you're in the market for a professional-level photo editor on a tablet, Photoshop doesn't disappoint. The iPad Pro's big advantage here is the fact that you can use the included Apple Pencil and still be able to accomplish quite a bit, even if you're limited by the smaller screen.

The Lightroom mobile app is the perfect go-to app for when I'm on the road. (\$149, Available here) When it comes to photographing anything, it's important to have an app that works with all of your kit. If you're shooting with an iPhone, it's a short walk to the nearest professional-grade professional studio, but if you're shooting with an Android, it's an entirely different story. Not only is it challenging to use any professional photo editing software on Android, it's pretty much impossible to use the rest of your kit. Using the Lightroom mobile app for Android has made my life a lot easier. I've cut down on the need to carry around a tripod (\$99), which has made my gear more mobile. But the best part of the app is the ability to seamlessly connect to my photos when I'm on the road. It's seamless. The program doesn't need a Wi-Fi connection to sync my files, the iOS app syncs your files into the free iOS app (available via the App Store), then syncs it right into the Android app. That might seem like a lot, but it's so much better than plugging directly into the computer.
